OPTOIN SUMMARY. This option aims to provide a high standard of protection through the installation of an approximately 415m long replacement channel positioned around the High School athletics pitch to allow all of the burns' flow to bypass the main channel and the current FPS channel. The work includes the following:

1. Excavate a 415m long channel to a maximum depth of 2.3m, bottom width of 3m, side slope of 1 in 3, channel slope of 1:200 and a Manning's n roughness value of 0.035.
2. Lower the left bank of the Turfford Burn at the entrance to the new channel by approximately 1.8m.
3. Block the current Turfford Burn and FPS channels at the entrance to the new channel.
